

DASH TRIM REMOVAL TOOL

Referred to as DTRT

PART NUMBER: **DM-40-22**

PLEASE READ BEFORE USING THIS TOOL.

Caution is advised when removing and reassembling wood or plastic parts of a dash.
Applying unnecessary force or pressure may cause a piece to crack or break.
This tool is made of high grade virgin materials. It is normal for this to flex when used.

The Dash Trim Removal Tool is ideal for removing automotive trim that typically surrounds the radio or climate control. By inserting the DTRT and using a twisting motion, it is helpful in releasing or dis-engaging the clips commonly used to hold the trim in place.

The DTRT is a very handy tool and can be used for a variety of tasks during an installation. It also is used for tucking antenna wiring into difficult places, i.e. headliners, under rockerpanels, etc.

Another unusual tool that is a must for installers is the wire worm.

Part#: DM-45-33
