PLEASE READ COMPLETE INSTRUCTIONS BEFORE INSTALLING THIS Pro.Fit VSM™.
All instructions assume a drivers seat vantage point. Caution is advised when removing and reassembling wood or plastic parts of a dash. Applying unnecessary force or pressure may cause a piece to crack or break.

Pro.Fit logo and part number will be right side up and readable when installed.

TOOLS REQUIRED: #2 Phillips screwdriver, 90 degree hook tool, 8mm socket, extension, and ratchet.

PARTS INCLUDED: Pro.Fit VSM™ and instructions.

LOCATION: Right of the radio and climate control.

STEP 1.

Begin by removing the trim bezel that surrounds the radio, climate control, two(2) air conditioning vents, and ignition switch. Insert 90 degree hook tool behind lower right corner of bezel, between bezel and dash pad. Work hook tool around, pulling off trim bezel and unsnapping a total of eight (8) clips. Disconnect wiring for 4-way hazard switch. Set trim bezel aside.

STEP 2.

Locate and remove the hex head bolt located on the lower right side of the radio mounting bracket. Locate and remove the four (4) screws holding the climate control in position. Loosen but do not remove the climate control.

STEP 3.

Place top hole of Pro.Fit VSM™ over screw hole in lower right hand corner of the radio, behind mounting tab on radio. Lower hole in Pro.Fit VSM™ will align with upper right Phillips screw hole from the climate control unit. Place climate control unit back into position. Replace screws and tighten.

STEP 4.

Re-install trim bezel, re-connecting any wiring that was disconnected. Install hang-up cup onto Pro.Fit VSM™.

This completes the installation of your Pro.Fit VSM™.
