PLEASE READ COMPLETE INSTRUCTIONS BEFORE INSTALLING THIS Pro.Fit VSM™.
 All instructions assume a drivers seat vantage point. Caution is advised when removing and reassembling wood or plastic parts of a dash. Applying unnecessary force or pressure may cause a piece to crack or break.

Pro.Fit logo and part number will be right side up and readable when installed.

TOOLS REQUIRED: Hook tool, #2 Phillips screwdriver, 8mm socket, extension, ratchet.

PARTS INCLUDED: Pro.Fit VSM™, instructions.

LOCATION: To the right of the radio.

STEP 1.

Begin by grasping and pulling to remove four (4) climate control lever knobs. Remove face plate of climate control by inserting hook tool in the climate control lever slots of the face plate and gently pull plate off. Set face plate aside.

STEP 2.

Remove Phillips screw that holds trim bezel in place. Screw is located in upper right corner of climate control. On upper left hand corner of climate control, remove screw that is installed upwardly (installed at a 45 degree angle to dash) which is holding the left side of bezel. Using interior hook tool, insert between upper right hand corner of bezel and dash pad, release clips and pivot trim bezel towards you. This will allow you to release two (2) tabs holding the bottom of bezel in place. Let hang to left side.

STEP 3.

Using 8mm socket, extension and ratchet, remove upper hex head bolt that secures radio in position. Install hang-up cup onto Pro.Fit VSM™. Place top hole of the Pro.Fit VSM™ over bolt hole and bottom hole over centering pin. Install and tighten hex head bolt. Reinstall trim bezel. Reinstalling Phillips screws, face plate, and climate control knobs.

This completes the installation of your Pro.Fit VSM™.
